

AREA OF POSSIBLE
POSITION
(70% PROBABILITY)

A line graph showing the relationship between Latitude (Y-axis) and Nautical Miles (X-axis). The Y-axis is labeled 'LATITUDE' and ranges from 'EQ' (Equator) to 60N, with major grid lines at 20N, 40N, and 60N. The X-axis is labeled 'NAUTICAL MILES' and ranges from 0 to 600, with major grid lines every 100 miles. Six curves are plotted, representing distances of 100, 200, 300, 400, 500, and 600 nautical miles. The curves are concave down, starting from the X-axis and curving upwards as distance increases. The 100-mile curve starts at approximately 100 nautical miles on the X-axis and reaches 60N at approximately 110 nautical miles. The 600-mile curve starts at 600 nautical miles on the X-axis and reaches 60N at approximately 610 nautical miles.
