The graph illustrates the relationship between Latitude and Nautical Miles. The Y-axis represents Latitude, ranging from the Equator (EQ) to 60° North (60N). The X-axis represents Nautical Miles, ranging from 0 to 600. Six curves are plotted, each representing a constant distance in nautical miles: 100, 200, 300, 400, 500, and 600. The curves show that for a given distance, the latitude increases as the distance increases, and the rate of increase is greater at lower latitudes.
